No. 7200082

THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME:

Purdue University
Agricultural Experiment Station

Whereas, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED NOVEL VARIETY OF SEXUALLY REPRODUCED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF seventeen YEARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC REPLENISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE RIGHT TO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, OR IMPORTING IT, OR EXPORTING IT, OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT PROVIDED BY THE PLANT VARIETY PROTECTION ACT. THE UNITED STATES SEED OF THIS VARIETY (1) SHALL BE SOLD BY VARIETY NAME ONLY AS A CLASS OF CERTIFIED SEED AND (2) SHALL CONFORM TO THE NUMBER OF GENERATIONS REQUIRED BY THE OWNER OF THE RIGHTS. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

SOYBEAN

Cutler 71

In Testimony Whereof, I have hereunto set my hand and caused the seal of the Plant Variety Protection Office to be affixed at the City of Washington this first day of August in the year of our Lord one thousand nine hundred and seventy three

APPLICATION FOR PLANT VARIETY PROTECTION CERTIFICATE

INSTRUCTIONS: *See Reverse.*

1. VARIETY NAME OR TEMPORARY DESIGNATION	2. KIND NAME	FOR OFFICIAL USE ONLY	
Cutler 71	Soybeans	PVPO NUMBER 72082	
3. GENUS AND SPECIES NAME	4. FAMILY NAME *(Botanical)*	FILING DATE 2/3/72	TIME 1:30 P.M.
Glycine max	Leguminosae		
	5. DATE OF DETERMINATION	FEE RECEIVED	CHARGES
	February 15, 1971	$250	

6. NAME OF APPLICANT(S)	7. ADDRESS *(Street and No. or R.F.D. No., City, State, and ZIP Code)*	8. TELEPHONE AREA CODE AND NUMBER
Purdue University Agricultural Experiment Station	Agricultural Experiment Station Purdue University Lafayette, Indiana 47907	317-749-2461

9. IF THE NAMED APPLICANT IS NOT A PERSON, FORM OF ORGANIZATION: *(Corporation, partnership, association, etc.)*	10. STATE OF INCORPORATION	11. DATE OF INCORPORATION
Land Grant University	Established by Indiana Statute 1869	May 6, 1869

12. Name and mailing address of applicant representative(s), if any, to serve in this application and receive all papers:
Dr. H. H. Kramer, Director
Agricultural Experiment Station
Purdue University
Lafayette, Indiana 47907

13. CHECK BOX BELOW FOR EACH ATTACHMENT SUBMITTED:

- [X] 12A. Exhibit A, Origin and Breeding History of the Variety *(See Section 52, P.L. 91-577)*
- [X] 12B. Exhibit B, Botanical Description of the Variety
- [ ] 12C. Exhibit C, Objective Description of the Variety
- [X] 12D. Exhibit D, Data Indicative of Novelty
- [X] 12E. Exhibit E, Statement of the Basis of Applicant's Ownership

The applicant declares that a viable sample of basic seed of this variety will be deposited upon request before issuance of a certificate and will be replenished periodically in accordance with such regulations as may be applicable. *(See Section 52, P.L. 91-577).*

14A. Does the applicant(s) specify that seed of this variety be sold by variety name only as a class of certified seed? *(See Section 83(a), P.L. 91-577) (If "Yes," answer 14B and 14C below.)* [X] YES [ ] NO

14B. Does the applicant(s) specify that this variety be limited as to number of generations?	14C. If "Yes," to 14B, how many generations of production beyond breeder seed?
[X] YES [ ] NO	Three

Applicant is informed that false representation herein can jeopardize protection and result in penalties.

The undersigned applicant(s) of this sexually-reproduced novel plant variety believes that the variety is distinct, uniform, and stable as required in Section 41 and is entitled to protection under the provisions of Section 42 of the Plant Variety Protection Act (P.L. 91-577).

EXHIBIT A

Origin and Breeding History of the Variety

Cutler 71

Cutler 71 is a composite of six F_3 lines from the cross Cutler^4 × Kent-Rps rxp-SL5 (Backcross derivative of Kent with added resistance to phytophthora rot and bacterial pustule). The original cross, designated CX414, was made by Dr. A. H. Probst, USDA Agronomist, at the Purdue Agricultural Experiment Station in 1965. Subsequent backcrosses were made in 1965 and 1966. Phytophthora root-rot inoculations during this period and subsequently were made by F. A. Laviolette and Dr. K. L. Athow, Purdue Botany and Plant Pathology Department.

The F_1 and F_2 generations from the cross Cutler^4 × Kent-Rps rxp-SL5 were grown in 1966 and 1967. Thirty-one homozygous phytophthora rot resistant F_2 plant selections were grown in F_3 rows in 1967.

The above 31 lines plus Cutler were grown in CX414BC_3 test at Evansville, Indiana in 1968. There were no distinct observable differences in agronomic or chemical characteristics among the 31 lines. The phytophthora rot resistant lines averaged slightly taller and lodged slightly more than Cutler. The six highest yielding lines were composited and assigned the designation C1481. This was used as the initial source of breeders seed.

In 1969, C1481 was grown in Uniform Test IV of The Uniform Soybean Tests Northern States conducted by the U. S. Regional Soybean Laboratory, Urbana, Illinois. This test was grown in California, Delaware, Illinois, Indiana, Kansas, Kentucky, Maryland, Missouri, Nebraska, New Jersey, Ohio, and Texas. In addition, the breeders seed was increased to 74 bushels.

In 1970, C1481 was again grown in Uniform Test IV. The 74 bushels of breeders seed was divided among the releasing states of Delaware, Illinois, Indiana, Kansas, Kentucky, Missouri, and Nebraska. C1481 was named Cutler 71 on February 15, 1971.

#72082

EXHIBIT B

Botanical Description of the Variety

Cutler 71

Cutler 71 soybean is identical to Cutler with the exceptions that it is resistant to phytophthora rot, has averaged 10 cm taller than Cutler, and is slightly more susceptible to lodging than Cutler. Cutler 71 is of Group IV maturity, has purple flowers, brown pubescence, brown pods, and shiny yellow seeds with black hila. Cutler 71 has medium sized ovate leaves and an indeterminate habit of growth. Cutler 71 is susceptible to bacterial blight, caused by Pseudomonas glycinea, bacterial pustule, caused by Xanthomonas phaseoli var. sojensis, brown spot, caused by Septoria glycines, and brown stem rot, caused by Cephalosporium gregatum. It is moderately susceptible to purple seed stain, caused by Cercospora kikuchii, and is resistant to phytophthora rot, caused by Phytophthora megasperma var. sojae and frogeye leafspot race 2, caused by Cercospora sojina. Cutler 71 is heterogeneous for high and low peroxidase activity in the seedcoat, flowers in about 70 days under 20-hour cool white fluorescent photoperiod, and has a hypocotyl length averaging 162 mm after germinating 9 days at 25° C, a critical temperature for differentiating strains.

#72082

EXHIBIT D

Data Indicative of Novelty

Cutler 71

Cutler 71 can be distinguished from other Group IV varieties on the basis of flower color, pubescence color, pod color, seed coat luster, seed coat color, hilum color, and reaction to Phytophthora megasperma var. sojae. Cutler 71 most closely resembles the variety Cutler, however, Cutler 71 is resistant and Cutler is susceptible to phytophthora rot and these two varieties can be distinguished on this basis.

OFFICE OF THE DIRECTOR

June 4, 1973

Robert J. Snyder, Examiner
Plant Variety Protection Office
Agricultural Marketing Service
U. S. Department of Agriculture
6525 Belcrest Road
Hyattsville, Maryland 20782

Dear Mr. Snyder:

To answer the question you raised in your letter of May 29, I quote from the Master Memorandum of Understanding between the Indiana Agricultural Experiment Station and the U. S. Department of Agriculture, Agricultural Research Service, relative to cooperative research.

Section C, paragraph 6.b. reads as follows:

"b. Plants, seeds, and plant materials used in this cooperative undertaking will be provided by the parties from time to time as mutually agreed upon. Such plants, seeds, and plant materials produced hereunder as may not be needed in this undertaking but may be needed in other research conducted by either party, shall be available to such party. New varieties or strains obtained through the cooperation shall be distributed for commercial growing, as and when mutually agreed upon. All plants, seeds, and plant materials produced and not needed in this undertaking or in other research, as provided above, shall be the property of the Agricultural Experiment Station which agrees to make to the Agricultural Research Service such reports of disposition as may be mutually agreed upon."

This memorandum of agreement was signed by E. L. Butz for the Experiment Station and by B. T. Shaw for the Agricultural Research Service and became effective August 1, 1957.

New varieties constitute plant materials produced and no longer needed "in this undertaking" since the undertaking is complete with the release of each new variety. The varieties 'Cutler 71', 'Amsoy 71' and 'Bonus' were distributed to commercial growers as mutually agreed upon, (as documented in the release statements which also constitute our report to ARS of disposition) at which point they become the "property of the Agricultural Experiment Station" as specifically stated in the memorandum of understanding.

continued - - - -

#72082

The memorandum provides that it "shall continue indefinitely but may be modified by mutual agreement between the parties in writing and may be discontinued at the request of either party. Requests for termination or any major change shall be submitted to the other party not less than 60 days in advance of the effective date desired." No change has been requested by either party since July 1, 1957.

We can supply the complete memorandum of understanding if you feel it necessary. However, the section quoted is the only one which bears on the question you raised in your letter of 29 May.

The memorandum thus states explicitly that the USDA does not wish to participate in ownership of new varieties and has released its principal rights in the varieties to the Agricultural Experiment Station of Purdue University.

Very truly yours,

H H Kramer

Dear Dr. Evans:

Subject: Expiration of Protection and Transfer of Seed Samples

As you requested, the National Seed Storage Laboratory has transfered the following samples to conventional storage and marked all records and GRIN, showing the samples expired.

PV #	VARIETY NAME	ACTION TAKEN
SOYBEAN		
7100016	SRF 100	Expired, transfer to NSSL 8-30-90
7100019	SRF 400	Expired, transfer to NSSL 8-30-90
7200077	SRF 450	Expired, transfer to NSSL 8-30-90
7200082	Cutler 71	Expired, transfer to NSSL 8-30-90
7200083	Amsoy 71	Expired, transfer to NSSL 8-30-90
7200086	SRF 150	Expired, transfer to NSSL 8-30-90
7200126	Bonus	Expired, transfer to NSSL 8-30-90
7300010	Buccaneer	Expired, transfer to NSSL 8-30-90

Sincerely,

Toni Dawn Pisano
